

SCTR's PUNE INSTITUTE OF COMPUTER TECHNOLOGY, PUNE-43

**An Autonomous Institute affiliated to the
Savitribai Phule Pune University
Approved by AICTE & Government of Maharashtra,
Accredited by NAAC (A+) & NBA [All eligible UG Programs]**

Master of Technology (Data Science)
Department of Computer Engineering
Curriculum Structure
(W.e.f. A.Y. 2024-25)

(Approved by the Board of Studies and Academic Council)

SCTR'S PUNE INSTITUTE OF COMPUTER TECHNOLOGY, PUNE-43
M. Tech. (Data Science) Curriculum Structure
With effect from the A.Y. 2024-25

Semester - I

Guidelines

Program Elective Course
Students may select any one of the courses or NPTEL MOOCs from the list recommended by the department. The total credits earned through MOOCs should be equivalent to the allocated credits for the respective Elective. (One credit will be awarded for a four-week MOOCs). MOOCs list will be updated at the beginning of the academic year.
Open Elective Courses
<ul style="list-style-type: none"> Students may select any one of the courses of 4 credits offered by any other department in the institute or Industry supported Course or MOOCs. The total credits earned through MOOCs should be equivalent to the allocated credits for the respective Open Elective Course. (One credit will be awarded for a four week MOOCs). MOOCs list will be updated at the beginning of the academic year.
Exit Criteria:
<ul style="list-style-type: none"> Post graduate diploma will be awarded if a student completes 40 credits and wishes to exit after first year of PG. A student will be allowed to enter/re-enter only at the odd semester and can only exit after the even semester.

SCTR'S PUNE INSTITUTE OF COMPUTER TECHNOLOGY, PUNE-43
M. Tech. (Data Science) Curriculum Structure
With effect from the A.Y. 2024-25

Abbreviations:

PCC	Program Core Course	L	Lecture	ISE	In Semester Examination
PEC	Program Elective Course	P	Practical	ESE	End Semester Examination
OEC	Open Elective Course	CIE	Continuous Internal Evaluation	AEC	Ability Enhancement Course
VSEC	Vocational Skill Enhancement Course	TW	Term Work	MOOC	Massive Open Online Course
HSS	Humanities/IKS/Research	OR	Oral	T	Tutorial

CIE [30]	Continuous Internal Evaluation: (Activity Based Learning Evaluation) The department shall declare the set of all applicable activities such as Problem Based Learning, Quizzes, field work, group discussion, but not limited to etc. The course coordinator, in consultation with course teachers, shall select any of three to four activities suitable for the course from the list declared by the department and get the selected activities approved from HoD. The Course teacher shall get the activities carried out by students, evaluate the student performance based on the prescribed rubrics. Department shall prepare the rubrics for all the activities and display the same before the commencement of academics.
ISE [20]	In-Semester Examination: Written examination shall be conducted for one hour duration on First Module for 20 marks .
ESE [50]	End-Semester Examination: Written examination shall be conducted for three hours duration on Modules II, III, IV for 50 marks .

Semester I

SCTR'S PUNE INSTITUTE OF COMPUTER TECHNOLOGY, PUNE-43

M. Tech. (Data Science) Curriculum Structure

With effect from the A.Y. 2024-25

Semester I

MDS1-001 Mathematical Foundations for Computing		
Teaching Scheme: L: 02 Hrs./week T: 01 Hr/week	Credits: 03	Examination Scheme: ISE: 20 marks CIE: 30 marks ESE: 50 marks
Prerequisite: Fundamentals of Mathematics		
<p>Course Objectives: Course intends to prepare the students</p> <ol style="list-style-type: none"> To explore basics of discrete mathematics for computing in computer science/data science applications. To explore various data structures and algorithmic solutions for storage and retrieval of data computational problems. To explore statistical measures and hypotheses for computing. To understand the use of probability for solving computer science/data science problems. To understand the use of linear algebra and calculus for solving computational problems. 		
<p>Course Outcomes: At the end of the course students will be able to</p> <ol style="list-style-type: none"> Apply discrete mathematics concepts like sets, relations to solve computing problems Choose suitable tree and graph data structures and its algorithms for solving problems in various domains. Analyze various central tendency, dispersion, and relationship measures for preprocessing data and use hypothesis testing. Select probability distributions functions and probabilistic models for clustering and classification problems. Apply linear algebra methods for reducing dimensionality and evaluating multi variable linear systems. 		
Course Contents		
Module I	Discrete Mathematics for Computing	8 Hrs.
	<p>Set Theory: Elementary Theory of Sets, Set Rules & Sets Combinations. Relations: Binary Relation, Equivalence Relation, Composite Relation, Partial Ordering Relation. Fundamentals of Graph Theory: Types, graph representation methods, Traveling-salesman problem, applications. Trees & Search Trees: balanced search trees, Multiway balanced search trees, splay tree, Trie, KD Tree Heaps: Binomial Heaps, Fibonacci Heap.</p> <p>Case Study: Mathematical modeling for applications of Graph Electrical network problem/ Flow graph notation/ Test case generation using graphs/Trie for spell checker/autocomplete string/ KD Tree for geographic information systems (GIS).</p>	
	Statistical Inference	
	Types of Statistical Inference, Descriptive Statistics, Inferential Statistics, Importance of Statistical Inference in computing. Measures of Central Tendency: Mean, Geometric mean, Harmonic mean, Median, Mode, Midrange, Measures of Dispersion: Range, inter	8 Hrs.

SCTR'S PUNE INSTITUTE OF COMPUTER TECHNOLOGY, PUNE-43

M. Tech. (Data Science) Curriculum Structure

With effect from the A.Y. 2024-25

Module II	<p>quartile range, Variance, Mean Deviation, Standard Deviation. Coefficient of variation: Moments, Skewness, Kurtosis, Pearson Correlation. Measures of relationship: Covariance, Pearson Correlation. Hypothesis testing: Parametric Tests: Means, for Differences between Means, for Comparing Two Related Samples of Proportions, for Difference between Proportions, for Comparing a Variance to Some Hypothesized Population Variance. Chi-square Test, and Analysis of variance and covariance. Nonparametric Tests: Sign Test, Wilcoxon (Signed Rank).</p> <p>Case study: Study datasets like Iris/Diamond/Churn and apply suitable central tendency, dispersion and relationship measures to preprocess the datasets. Use of open-source statistical tools for hypothesis testing.</p>	
Module III	<p align="center">Probability Theory</p> <p>Elements of Probability Theory: Basic Concept, Conditional Probability. Random variables: Cumulative Distribution Function, Expectation and Variance of Random variables, Covariance & Correlation. Probability Distributions: Discrete Uniform Distribution, Bernoulli, Binomial, Poisson, Geometric, and Hyper geometric Distributions. Continuous Distribution: Continuous Uniform Distribution, Normal Distribution, Exponential Distribution. Inductive statistics: Maximum Likelihood Estimation. Bayes' Theorem, Joint Probability, Bayesian network. Markov model.</p> <p>Case Study: Bayesian Network for Spatial data/Markov model for product lifecycle</p>	8 Hrs.
Module IV	<p align="center">Linear Algebra & Vector Calculus</p> <p>Matrix and vector algebra, systems of linear equations using matrices, linear independence, Matrix factorization concept/LU decomposition, Eigenvalues and eigenvectors. Understanding of calculus: concept of function and derivative, Multivariate calculus: concept, Partial Derivatives, chain rule.</p> <p>Case Study: System of linear equations for Electrical Networks/Eigen values & Eigen vector for Pagerank and PCA algorithm/ Gradient Descent</p>	8 Hrs.
	Case Studies of industry relevance/recent trends	5 Hrs.

M. Tech. (Data Science) Curriculum Structure

With effect from the A.Y. 2024-25

Teaching Scheme: L: 03 Hrs. /week	Credits: 03	Examination Scheme: ISE: 20 marks CIE: 30 marks ESE: 50 marks
Prerequisite: Mathematics, Data Mining.		
Course Objectives: Course intends to prepare the students <ol style="list-style-type: none"> 1. To understand basic concepts and possible applications of machine learning. 2. To study and illustrate various data preprocessing methods and Supervised, Unsupervised machine learning techniques. 3. To study the basic principles of reinforcement learning 4. To understand the basic principles of optimization and its importance in machine learning. 		
Course Outcomes: At the end of the course students will be able to <ol style="list-style-type: none"> 1. Describe the basic concepts and possible applications of machine learning. 2. Evaluate classification, regression and clustering methods for real world applications for specified data. 3. Apply reinforcement algorithms to real world problems. 4. Solve Optimization problems in machine learning 		
Course Contents		
Module I	Introduction to Machine Learning and Regression	8 Hrs.
	Models of Machine learning: Geometric model, Probabilistic Models, Logical Models, Grouping and grading models, Parametric and non-parametric models Features: Concept of Feature, Feature Extraction, Feature Selection Data Preprocessing and Dimensionality Reduction: Data integration, data reduction, concept hierarchy generation, PCA, LDA Regression: Introduction, Multivariate Linear regression, Logistic regression, Lasso and Ridge Regression Assessing performance of regression – Error measures, Overfitting.	
Module II	Classification and Clustering algorithms	8 Hrs.
	Classification: Classification concepts, Binary and multi-class classification, K nearest neighbor, Decision Tree Representation, Alternative measures for selecting attributes, ID3 algorithm, Naïve Bayes, Support Vector Machines as a linear and non-linear classifier. Ensemble methods Introduction, Bagging, Boosting and Adaboost, Random Forest. Clustering: Introduction, Distance based clustering- K-means algorithm, Hierarchical Clustering-Agglomerative and Hierarchical, Expectation Maximization methods, Choosing number of clusters- silhouettes. Performance measure metric: Mean Square Error, R-squared, Precision, Recall, F1-score, Accuracy.	
	Reinforcement learning	8 Hrs.

SCTR'S PUNE INSTITUTE OF COMPUTER TECHNOLOGY, PUNE-43

M. Tech. (Data Science) Curriculum Structure

With effect from the A.Y. 2024-25

Module III	Elements of Reinforcement Learning, Model-Based Learning, Dynamic programming, Monte Carlo, Temporal Difference Learning, Generalization. Bandit algorithms: Upper Confidence Bound algorithm. Case Study: Incremental Document Classification	
Module IV	Optimization Algorithms	8 Hrs.
	Convex Functions, First and Second Order Conditions for Optimisations, Convex and Non-Convex Optimisation, problems in Machine Learning. Gradient Descent: math, programming basic optimisation problems and their solutions, Variants of Gradient Descent: Projected, Stochastic, Proximal, Accelerated, Coordinate Descent. Case Study: Stochastic Gradient Descent for Employee Attrition	
	Case Studies of industry relevance/recent trends	5 Hrs.

MDS1-003 Advanced Data Management and Warehousing		
Teaching Scheme: L: 04 Hrs./Week	Credits: 04	Examination Scheme: ISE: 20 marks CIE: 30 marks ESE: 50 marks
Prerequisite: Discrete Mathematics, Database Management System		
Course Objectives: Course intends to prepare the students <ol style="list-style-type: none"> 1. To understand the database environment and development process. 2. To study database design and its types. 3. To understand data warehouse architecture and enterprise-wide applications. 4. To understand advances in Data warehouse. 		
Course Outcomes: At the end of the course students will be able to <ol style="list-style-type: none"> 1. Design a suitable database in a parallel and distributed environment. 2. Apply appropriate normal forms and implement queries for given applications. 3. Design a data warehouse model and apply big data descriptive analytics for real-world application. 4. Illustrate recent developments in the Data warehouse. 		
Course Contents		
Module I	The Database Environment and development process	9 Hrs.
	Basic concepts: Data, Database System Structure, Types of databases like RDBMS, OORDBMS, NoSQL: document-oriented, graph. The Database approach: Data models, The components of database environment. The database development process: System development life cycle. Evolution of database system. Database application: Personal, multitier and Enterprise applications. Case study: Design and Develop data modeling for any suitable application.	
Module II	Database design	10 Hrs.
	Enhanced ER model, universal data model, Relational Database design, Normalization during logical database design and reverse engineering Advanced Normal Forms. Implementation: Basic and Advanced SQL Parallel Databases: I/O Parallelism, Inter and Intra Query Parallelism, Inter and Intra Operation Parallelism. Distributed DBMS: Location transparency, synchronous and asynchronous, local and global transaction, commit protocol	
Big Data Descriptive Analytics		

SCTR'S PUNE INSTITUTE OF COMPUTER TECHNOLOGY, PUNE-43
M. Tech. (Data Science) Curriculum Structure
With effect from the A.Y. 2024-25

Module III	<p>Master Data Management, Need for Data warehousing: Escalating need for strategic information, failure of past system, operational versus decision support systems. Data Integration for Data warehousing :ETL process, Data Transformation.</p> <p>Descriptive analytics using data warehouse, Online analytical processing tools, SQL OLAP queries, MOLAP and ROLAP. Predictive and prescriptive analytics</p> <p>Case Study- Design a data warehouse for a suitable system using an open-source tool.</p>	9 Hrs.
Module IV	<p style="text-align: center;">Advanced topics in Data Warehouse</p> <p>Spatial and temporal Data Warehouse: General concepts of spatial databases, Conceptual modeling of spatial data warehouse, Manipulating temporal information in SQL, conceptual design of temporal data warehouse</p> <p>Graph data warehouse: Graph Data Models, Property Graph database system.</p> <p>Case Studies of industry relevance/recent trends</p>	9 Hrs.

MDS1-004 Research Methodology		
Teaching Scheme: L: 03 Hrs./week	Credits: 03	Examination Scheme: ISE: 20 marks CIE: 30 marks ESE: 50 marks
Prerequisite: Mathematical foundations		
Course Objectives: Course intends to prepare the students		
<ol style="list-style-type: none"> 1. To understand the philosophy of research in general. 2. To understand diverse aspects of research methodologies. 3. To enhance proficiency in both verbal and written presentation abilities. 4. To get familiar with Intellectual Property Rights (IPR) and plagiarism. 		
Course Outcomes: At the end of the Course Students will be able to		
<ol style="list-style-type: none"> 1. Develop the significance of research and methodologies to collect and analyze data. 2. Formulate hypotheses through experimentation. 3. Design a comprehensive research report. 4. Distinguish various forms of intellectual properties. 		
Course Contents		
Module I	Introduction to RM, defining the research problem and research design	8 Hrs.
	Why do research? Meaning, objectives, Research types: computer science and engineering applications specific to nature of research in system building, research process, Criteria of good research. Formulating a research problem: Selecting a research problem, Writing research Objectives Conceptualizing a research design: Meaning, Need and Basic principles of research design.	
Module II	Literature survey, Data Collection and Sampling methods	8 Hrs.
	Literature Survey: Importance, planning, locating relevant literature, managing information, and writing a review. Methods for primary and secondary data collection, data processing operations, measures for analyzing data, basics of sampling theory, concept of standard error, estimations on populations, determining sample size.	
Module III	Technical Content Writing	8 Hrs.
	Report writing significance and steps. Types of technical content publishing: White paper, journal, conference, poster, short paper etc. Writing various technical papers: survey paper, journal paper, indexing agencies, COPE.	
Module IV	Intellectual Property Rights	8 Hrs.
	Intellectual property: types of IP, IPR in India and abroad.

Program Elective - I

MDS1-005A IoT Architecture and Protocols		
Teaching Scheme: L : 03 Hrs. / Week	Credits: 03	Examination Scheme: ISE: 20 marks CIE: 30 marks ESE: 50 marks
Prerequisite: Computer Networks, Data Communication, Wireless Sensor Network		
Course Objectives: Course intends to prepare the students <ol style="list-style-type: none"> To understand the fundamentals of embedded systems and IoT. To learn methodologies for IoT application development. To study architecture and protocol standards of IoT systems. To learn real world application scenarios of IoT using real time example case studies. 		
Course Outcomes: At the end of the course students will be able to <ol style="list-style-type: none"> Identify the need of IoT and embedded systems. Illustrate integration of sensors with embedded devices like Raspberry Pi/BBB/Arduino. Distinguish different IoT application layer protocols. Design Cloud based IoT applications using embedded devices. 		
Course Contents		
Module I	Introduction to embedded systems and IoT	8 Hrs.
	Introduction to Embedded systems: Introduction to Embedded systems, Sensors and actuators, Challenges. IoT: Introduction, characteristics, application areas, Structure of IoT Applications and Functional blocks of IoT IoT enabling technologies: Cloud computing, Big data analytics, WSN, advantages and disadvantages of IoT with challenges.	
Module II	IoT Architectures and Components	8 Hrs.
	IoT Architectures: Introduction, Functional View, Information View, Deployment and Operational View, Other Relevant architectural views. Hardware and software Components of IoT: Introduction to Arduino, Raspberry pi, NodeMCU, BBB and interfacing. Designing IoT applications using embedded devices.	
Module III	IoT Data Link Layer and Network Layer protocols	8 Hrs.
	IoT reference model, IoT Levels and Deployment templates. Physical/Link Layer, IEEE802.15.4 and ZigBee, Low-power Wi-Fi, Bluetooth and BLE. Network Layer IP Based Protocols, The 6LoWPAN Adaptation Layer and RPL.	
Module IV	IoT application layer protocols	

SCTR'S PUNE INSTITUTE OF COMPUTER TECHNOLOGY, PUNE-43

M. Tech. (Data Science) Curriculum Structure

With effect from the A.Y. 2024-25

	<p>Application Layer protocols: MQTT, CoAP, AMQP, XMPP, WebSocket. Integration of IoT with cloud and REST Architecture. IoT Security challenges, Privacy Issues in the IoT, The Role of Authorization, IoT-OAS: Delegation-based Authorization for the Internet of Things, MQTTs, HTTPs.</p> <p>Case Study : Home automation system/Smart irrigation system/Remote health monitoring using IoT</p>	8 Hrs.
	Case Studies of industry relevance/recent trends	5 Hrs.

MDS1-005B Information Security		
Teaching Scheme: L: 03 Hrs./week	Credits: 03	Examination Scheme: ISE: 20 marks CIE: 30 marks ESE: 50 marks
Prerequisite: Basic Mathematics, Matrix Inverse, Networking Protocols, Sniffing Tools		
Course Objectives: Course intends to prepare the students <ol style="list-style-type: none"> 1. To classify threats to assess damages to information systems. 2. To acquire the knowledge of mathematics for cryptography, understand the concepts of cryptography. 3. To examine firewalls in the context of intrusion detection systems (IDS). 4. To learn the strengths & weaknesses of the Indian IT Act along with the amendment to the Act. 		
Course Outcomes: At the end of the course students will be able to <ol style="list-style-type: none"> 1. Apply the Euclidean algorithm, Fermat's theorem and Euler's theorem for numerical problems. 2. Apply appropriate cryptographic techniques such as symmetric & asymmetric key cryptography. 3. Evaluate information security threats & vulnerabilities in information systems using security measures. 4. Comprehend the authentication services Kerberos & X.509 directory services. 		
Course Contents		
Module I	Mathematical Foundations for Cryptography	08 Hrs.
	Modular Arithmetic: Notations & Operations, Divisibility & Division Algorithm, Euler's totient theorem, General formula Phi function, Euclid's method of finding GCD, Extended Euclid's algorithm. Computing Galois field, Factoring, Prime numbers, relative prime, Fermat's theorem, Application of Fermat's little theorem & congruence. Primality testing & its types, Recommended primality test. The Chinese Remainder Theorem, Discrete Logarithm. Applications of mathematics in cryptography.	
Module II	Elementary Cryptography	08 Hrs.
	Model of Network Security, Network Access Security Model, Security Attacks, Security Services. CIA (Confidentiality Integrity Availability). Classical Encryption Techniques & their cryptanalysis: Stream Ciphers, Substitution Techniques: Caesar, Mono alphabetic Ciphers, Playfair Cipher, Hill Cipher, Polyalphabetic Ciphers, Transposition Techniques, Block Ciphers, Data Encryption Standards (DES), 3DES, Advanced Encryption standard. Public key Cryptography & RSA, Mutual trust: Key Management & distribution, Diffie-Hellman key exchange, Elliptic curve cryptography. Example for a given scenario to identify & justify levels of compromise in CIA Open Source / Trial version tools: cryptool version 2. Study- Sniffing tool, Cain & Abel, iptables, Suricata. Survey papers e.g. Fully Homomorphic Encryption (FHE)

M. Tech. (Data Science) Curriculum Structure

With effect from the A.Y. 2024-25

Module III	Security to Authenticity and Integrity	08 Hrs.
	Authentication: Requirements, Protocols: One-way Authentication, Mutual Authentication, Centralized Authentication, The Needham-Schroeder Protocol versions, Applications: Kerberos, X.509 Directory Services, Biometrics. Cryptographic Hash functions: SHA3, MD5	
Module IV	Cybercrimes and Cybersecurity: The Legal Perspective	08 Hrs.
	Wrestling between safeguard & attack. Vulnerabilities: Technology weaknesses, Configuration weaknesses, Security policy weaknesses. Attacks: Reconnaissance, Access, DoS (Denial of Service), Worms, viruses & Trojan horse. Non-Cryptographic Protocol Vulnerabilities: DDoS (Distributed DoS), Session Hijacking & Spoofing, Wireless LAN (Local Area Network) vulnerabilities. IEEE 802.11 wireless LAN security. Cyber Crime, Classification of Cybercrimes, Cyber stalking, The Indian IT Act, Psychology, Personality disorder & its causes. Cybercrime & Cyberterrorism: Social, Political, Ethical & Psychological mindset Dimensions, Cyber offenses: How criminals plan them. Intellectual Property in Cyberspace. Case study: Configure filtering on router / Survey on Data Recovery Tools / Obfuscation & write your own wrappers for it. Cybercrime: Illustrations, Mini-cases.	
	Case Studies of industry relevance/recent trends	5 Hrs.

MDS1-005C Natural Language Processing		
Teaching Scheme: L: 03 Hrs./ Week	Credits: 03	Examination Scheme: ISE: 20 marks CIE: 30 marks ESE: 50 marks
Prerequisite: Theory of Computation, Elementary Probability and Statistics, Basic understanding of Machine Learning		
Course Objectives: Course intends to prepare the students <ol style="list-style-type: none"> 1. To be familiar with fundamental concepts of Computational Linguistics. 2. To understand various text pre-processing methods like tagging, parsing and semantic analysis. 3. To study neural network models for processing of natural language. 4. To get acquainted with modern approaches and applications in Computational Linguistics. 		
Course Outcomes At the end of the course students will be able to <ol style="list-style-type: none"> 1. Apply basic text processing techniques for given input. 2. Analyze syntax and semantics of natural language data. 3. Design neural language models for NLP application. 4. Design machine translation and dialogue system. 		
Course Contents		
Module I	Introduction	08 Hrs.
	Introduction: Computing, Natural Language Processing and Linguistics, Stages of NLP Text Pre-processing: sentence segmentation, Tokenization, feature extraction, issues in tokenization for different languages, word segmentation, text segmentation, normalization, case folding, Morphology, Stemming: Porters Algorithm, lemmatization. Spelling correction - dynamic programming approach for finding edit distance, N-gram Language Modeling- context sensitive spelling correction probabilistic language model, auto completion prediction.	
Module II	Tagging, Syntax and Semantics	8 Hrs.
	Sequence Labeling for Parts of Speech, HMM for speech tagging, Viterbi Algorithm, Conditional Random Fields.	

SCTR'S PUNE INSTITUTE OF COMPUTER TECHNOLOGY, PUNE-43

M. Tech. (Data Science) Curriculum Structure

With effect from the A.Y. 2024-25

	<p>Syntax: Constituency and dependency parsing, Constituency parser -Syntactic structure, Parsing methodology, Different parsing algorithms, Parsing in case of ambiguity, Probabilistic parsing, CKY algorithm, Issues in parsing, Dependency parsing- Syntactic structure, Parsing methodology, Transition-Based Dependency Parsing, Graph-Based dependency parsing, Evaluation, Co-reference resolution</p> <p>Semantics: Word Senses, Word relations, Word similarity and thesaurus methods, Name Entity Recognition, Word sense disambiguation, WordNet. Lexical and Distributional Semantics - Introduction, models of semantics, applications.</p>	
Module III	Neural Language Models, Large Language Models	08 Hrs.
	<p>Overview of Machine Learning- Basics of Neural Networks, Feedforward neural Network for NLP classification task, word embeddings, Recurrent Neural Networks (RNNs) as language model, Long short-term memory (LSTMs) network</p> <p>Transformers-Self attention network, Large Language Models: with transformers, Generation by sampling, training transformer.</p> <p>Fine-tuning and Masked language models: Bidirectional transformer encoders, training bidirectional encoders, fine tuning language models</p>	
	Applications - Machine Translation and Dialogue System	
Module IV	<p>Language Divergences and Typology, Machine Translation using encoder decoder, Back-Translation, MT Evaluation</p> <p>Chatbots and Dialogue System: Properties of Human Conversation, Frame-Based Dialogue system, Chatbot, Dialogue system design</p> <p>Transfer learning via Prompting, Chain of Thought Prompting, Tree of Thought Prompting and Instruction Tuning, Retrieval Augmented Generation (RAG) techniques, Using vector datastore for RAG</p>	08 Hrs.
	<p>Case Studies of industry relevance/recent trends</p>

MDS1-005D Distributed Operating System		
Teaching Scheme: L: 03 Hrs./week	Credits: 03	Examination Scheme: ISE: 20 marks CIE: 30 marks ESE: 50 marks
Prerequisite: Fundamentals of Operating System		
Course Objectives:		
Course intends to prepare the students		
<ol style="list-style-type: none"> 1. To understand Characteristics and Challenges of distributed systems. 2. To learn process management in distributed operating systems. 3. To study various strategies of Shared Memory and Inter Process Communication. 4. To understand Design Principles of Distributed File Management. 		
Course Outcomes:		
At the end of the course students will be able to		
<ol style="list-style-type: none"> 1. Describe the challenges in distributed OS. 2. Demonstrate the process of communication and synchronization. 3. Design application to retrieve the data stored in distributed Memory. 4. Compare different File Systems. 		
Course Contents		
Module I	Introduction to Distributed Operating System	8 Hrs.
	Fundamentals: Characteristics and challenges of distributed systems. Design issues in distributed operating systems; Architectural models, Desirable features of good global scheduling algorithms, Task Assignment Approach, Load-Balancing Approach, Load-Sharing Approach.	
Module II	Process Management and Synchronization	8 Hrs.
	Threads and Process, Process States, Scheduling in DOS, Process Migration. Synchronization: Clock Synchronization, Event Ordering, Mutual Exclusion, Deadlock, Election Algorithms.	
Module III	Distributed Shared Memory	8 Hrs.
	General Architecture of DSM Systems, Design and Implementation issues in DSM, Consistency Models, Implementing Sequential Consistency Model, Page based distributed shared memory, shared – variable distributed shared memory, object-based distributed shared memory. Replacement Strategy, Thrashing, Heterogeneous DSM, Advantages of DSM.	
Module IV	Distributed File System and Naming	8 Hrs.
	File-Accessing Models, File-Sharing Semantics, File-caching Schemes, File Replication, Fault Tolerance, Atomic Transactions, Design Principles, Naming: Fundamental Terminologies and Concepts, System-Oriented names, Object-Locating Mechanisms, Human-Oriented names, Name cache, Naming and Security. Case Study : File Management in Linux/Windows/Android (EoS)/Andrew File System File Handling System Call implementation in Rust. Real Time Linux(RT Linux).	
	Case Studies of industry relevance/recent trends	5 Hrs.

MDS1-006 Laboratory Proficiency -I		
Teaching Scheme: P: 04 Hrs./Wee	Credits: 02	Examination Scheme: CIE/TW: 25 Marks ESE(P/OR): 25 Marks
Prerequisite: Knowledge of programming languages, Basics of Python/R/Java		
All assignments are compulsory. Each student should implement the assignments individually. Laboratory teachers should make sure that the dataset/code/write up is not the same.		
<p>Course Objectives: Course intends to prepare the students</p> <ol style="list-style-type: none"> 1. To explore graph theory in computational problem-solving. 2. To use descriptive statistical measures for conducting statistical inference. 3. To explore data design and skills for data warehouse development phases. 4. To examine NoSQL databases for their functionality and applications. 5. To develop IoT applications utilizing embedded devices. 6. To engineer security solutions tailored for real-world applications. 7. To Explore different approaches to Shared Memory and Inter-process Communication. 8. To Comprehend the fundamental principles behind designing Distributed File Management systems. 		
<p>Course Outcomes: At the end of the course students will be able to</p> <ol style="list-style-type: none"> 1. Apply Graph Theory for problem modeling and resolution. 2. Analyze population characteristics through central tendency, dispersion, and relationships. 3. Design schema and execute database queries using NoSQL. 4. Design & store data in a data warehouse using open-source tool. 5. Develop IoT applications leveraging embedded devices. 6. Apply cryptographic techniques and tools for problem-solving applications. 7. Implement process and file management system calls using C/Rust. 		
All assignments are compulsory. Each student should implement the assignment individually. Every student should use a different data set.		
Mathematical Foundations for Computing		
<ol style="list-style-type: none"> 1. a. Write a program to represent user's information in social networks using graphs. Find the number of associations of each user. <div style="text-align: center;">OR</div> b. Design an algorithm to organize the sequence of courses within engineering programs, leveraging graph theory to account for the prerequisite dependencies among courses. 2. Write a program, in the language of your choice, to calculate measures of central tendency, dispersion and relationship of given data. 		

SCTR'S PUNE INSTITUTE OF COMPUTER TECHNOLOGY, PUNE-43

M. Tech. (Data Science) Curriculum Structure

With effect from the A.Y. 2024-25

Advanced Machine Learning

3. Download Email spam classification dataset from Kaggle <https://www.kaggle.com/datasets/balaka18/email-spam-classification-dataset-csv>. Email Spam detection has two states: a) Normal State – Not Spam, b) Abnormal State – Spam. Use K-Nearest Neighbors and Support Vector Machine to classify the email. Extract confusion matrix from the test results and compare the performance of both.

4. Download Housing Rent Prediction Dataset from Kaggle and predict the house rent using regression. <https://www.kaggle.com/datasets/iamsouravbanerjee/house-rent-prediction-dataset/>

Advanced Data Management and Warehousing

5. For an organization of your choice, choose a set of business processes.
- Design star/ snowflake schemas for analyzing these processes. Create a fact constellation schema by combining them. Eg. University database, Manufacturing Industry.
 - Use an open source ETL tool to extract data from different data sources, apply suitable transformations and load into destination tables. Eg. Manufacturing Industry- data of sales, products, purchase.
6. Implement the following NoSQL queries for the product review database.
- Create a collection product review database.
 - Insert 5 documents in the collection.
 - Find the product list sorted by price of the product from lowest to highest. Skip first two documents.
 - Delete product review document from the collection where the rating is less than two and product type is 'camera'

IoT Architecture & Protocols

- Design and develop a home automation security system using embedded devices.
- Design and develop a remote health monitoring system using IoT devices and ThingSpeak cloud.

Information security

9. Implement the Diffie-Hellman Key Exchange mechanism using HTML & JavaScript. Consider the end user as one of the parties (Alice) & the JavaScript application as an other party (bob). Also demonstrate MITM (man in the middle attack) on it.
10. a. Write a program for Elliptic curve cryptography.
- OR
- b. Write a program to apply Advanced Encryption Standard (AES) Algorithm for a practical application like URL Encryption

Natural Language Processing

- Implement complete natural language processing pipeline for Indic language text input.
- Implement Conversational interface (chatbot) using python.

SCTR'S PUNE INSTITUTE OF COMPUTER TECHNOLOGY, PUNE-43
M. Tech. (Data Science) Curriculum Structure
With effect from the A.Y. 2024-25

Distributed Operating System

13. Develop a program in C or Rust to implement Process Management System Calls, which enable the creation, manipulation, and control of processes within an operating system environment.
14. Design and implement a Distributed File System (DFS) like Hadoop Distributed File System (HDFS), capable of storing and managing large volumes of data across multiple nodes in a distributed environment.
15. Mini Project (Based on Core or Elective subjects)

M. Tech. (Data Science) Curriculum Structure
With effect from the A.Y. 2024-25

MDS1-007 Research and Technical Communication Laboratory		
Teaching Scheme: P: 02 Hrs./Week	Credits: 01	Examination Scheme: CIE/TW: 25 Marks
Prerequisite: Basic statistics		
Course Objectives: Course intends to prepare the students <ol style="list-style-type: none"> 1. To understand research papers. 2. To formulate research questions, hypotheses and derive research objectives. 3. To enhance proficiency in both verbal and written presentation abilities. 4. To get familiar with research proposals and patent writing. 		
Course Outcomes: At the end of the course students will be able to <ol style="list-style-type: none"> 1. Review the research paper for survey, methodology and conclusion. 2. Analyze research data using relevant statistical techniques. 3. Interpret the research findings. 4. Communicate research findings through written reports and oral presentations. 		
1. Reviewing Research papers <ol style="list-style-type: none"> a. Write a set of research questions for the case study of your interested topic. Construct the set of research objectives from the set of questions. b. Utilize academic search tools to extract pertinent journal papers. Engage in comprehensive reading of the paper, focusing on the following aspects: major contribution, datasets utilized, methodology employed, analysis and outcomes, conclusions drawn, and any limitations identified. Post-review, articulate the research question believed to have been addressed by the author. Evaluate whether the paper effectively substantiates its conclusions in addressing the aforementioned question. 		
2. Literature Review Quality and research proposal <ol style="list-style-type: none"> a) Select a journal paper within your engineering discipline and provide a detailed summary of its literature review section, comprising 400 to 500 words. Evaluate the quality and relevance of the papers cited within the review, assessing the commentary on their contributions to the broader field. Additionally, analyze any notable omissions of papers that hold significant importance within the field. b) Craft a new research proposal based on insights gleaned from a chosen published journal paper. Focus specifically on scrutinizing the discussion and conclusion sections of the paper to identify suggestions for future research endeavors. 		
3. Data modeling and statistical review <ol style="list-style-type: none"> a) Download a set of weather data from the Internet covering the temperature and atmospheric pressure over five days period. Present the data using 2D and 3D plots, and so deduce if the weather conditions are trending either higher or lower over these five days period. 		

b) Numerical modeling: Find a research paper that employs numerical modeling to validate experimental findings. Compare and contrast the differences observed between the experimental and modeling results. Evaluate whether the authors have provided insights into the accuracy of both the experimental and modeling methodologies. Provide recommendations for enhancing the quality of the modeling techniques presented in the paper.

c) Statistical review: Within your engineering domain, examine a published paper incorporating statistical analysis. Draft a concise report delineating the statistical methods employed. Propose enhancements to the statistical analysis. Recommend additional parameters that could have been captured during data acquisition and elucidate how to analyze the comprehensive dataset to ascertain the influence and statistical significance of these supplementary measurements.

4. Research Paper analysis

1. Note the keywords and type them into one of the web-based academic search engines (e.g. googlescholar.com).
 - a. Does the original article appear in the search results?
 - b. Compare the citations of this paper with those from the most highly cited paper in the search results.
 - c. If this paper was published before your original article, is it cited in your article? Do you think this high-cited paper should have been listed as a reference in your original article? Give reasons for your decision.
2. How many citations does this article have?
3. Have the same authors published further work in this field?
 - a. How many citations does this highly cited article have?

5. Research proposal

Generate a novel research proposal based on an existing published journal paper by following these steps:

1. Begin with an introduction that outlines the research problem and objectives.
2. Provide background information and rationale to contextualize the proposed research.
3. Detail the methodology, including research design, data collection methods, and analytical techniques.
4. Write a research plan and budget requirements.
5. Summarize the conclusions drawn from the existing paper and propose areas for future research.
6. Compile a bibliography listing all the references cited in the proposal.

6. Patent claims identification

Examine a journal article within your field that was published around five years ago. Analyze the paper's key findings and identify significant outcomes. Structure these outcomes in a format akin to patent claims, ensuring they represent novel advancements not readily deduced from prior research.

With effect from the A.Y. 2024-25

MDS1-008 Programming Proficiency Laboratory		
Teaching Scheme: P: 02 Hrs./Week	Credits: 01	Examination Scheme: CIE/TW: 25 Marks
Prerequisite: Basics of Programming		
<p>Course Objectives: Course intends to prepare the students</p> <ol style="list-style-type: none"> 1. To study Python/R/Java programming. 2. To study use of Python/R/Java programming in various applications such as File Handling, Web Scraping, Data Preprocessing, Data Visualization, Natural Language Processing, Machine Learning, Graphical User Interface. 3. To explore functions in Python/R/Java for evaluating performance of the designed model. 		
<p>Course Outcomes: At the end of the course students will be able to</p> <ol style="list-style-type: none"> 1. Write a program in Python/R/Java language. 2. Implement File Handling, Web Scraping using Python/R/Java language. 3. Write a program for Data Preprocessing, Data Visualization using Python/R language. 4. Develop Graphical User Interface in Python/R/Java language. 5. Analyze performance of the designed model by using functions in Python/R/Java. 		
<ol style="list-style-type: none"> 1. <ol style="list-style-type: none"> A. Design a program that retrieves and lists the names of all regional languages along with the number of related articles in the order they are presented on Wikipedia.org B. Develop a tool to extract and organize images from a specific web page URL, providing options for filtering, sorting, and downloading the images based on various criteria such as resolution, file type, or metadata 		
<ol style="list-style-type: none"> 2. <ol style="list-style-type: none"> A. Write a program to perform various data preprocessing operations such as handling missing values, one hot encoding, label encoding & data normalization on the following dataset. Dataset: https://rb.gy/ppmnxv B. Write a program to reduce the number of features in the following dataset while preserving most of the important information. Use techniques such Principal Component Analysis (PCA), t-distributed Stochastic Neighbor Embedding (t-SNE), or feature selection methods like Recursive Feature Elimination (RFE) for this purpose. Dataset: https://shorturl.at/aejsM. 		
<ol style="list-style-type: none"> 3. <ol style="list-style-type: none"> A. Write a program to visualize educational data such as student performance, attendance, and learning outcomes to identify areas for improvement, track progress over time, and personalize learning experiences. B. Design a data visualization dashboard to analyze the monthly sales performance of a retail store over the past year. The dashboard should include visualizations of total sales, average sales per day, and sales trends over time. Additionally, it should identify the best and worst performing months and provide insights into factors affecting sales fluctuations. 		

SCTR'S PUNE INSTITUTE OF COMPUTER TECHNOLOGY, PUNE-43

M. Tech. (Data Science) Curriculum Structure

With effect from the A.Y. 2024-25

4.

A. Write a program to explore different tokenization techniques such as whitespace tokenization, word tokenization, or sentence tokenization.

B. Write a program to implement the Porter Stemmer algorithm for Stemming.

5.

A. Write a program to predict the house price using a regression algorithm in machine learning. Evaluate the performance of the model using various performance metrics such as Mean Absolute Error (MAE), Mean Squared Error (MSE), Huber Loss & R2 score. Link to dataset: <https://rb.gy/ppmnnxv>

B. Write a program to split the Iris flower dataset into 80% train data and 20% test data. Fit the data into the Naive Bayes model for training and testing. Plot the Confusion Matrix. Evaluate the performance using various performance metrics such as Accuracy, Precision, Recall & F1 Score

6.

A. Write a program to design a BMI (Body Mass Index) calculator application using tkinter library in Python / shiny library in R where users can input their height and weight, and the application calculates and displays their BMI along with a corresponding interpretation (e.g., underweight, normal weight, overweight).

B. Build a simple calculator application using the tkinter library in Python / shiny library in R that performs basic arithmetic operations such as addition, subtraction, multiplication, and division. The application should have a user interface with buttons for numeric input and operations. (Graphical User Interface)

With effect from the A.Y. 2024-25

Semester II

MDS2-009 Data Modelling and Visualization		
Teaching Scheme: L: 03 Hrs./Week	Credits: 03	Examination Scheme: ISE: 20 marks CIE: 30 marks ESE: 50 marks
Prerequisite: Mathematical Foundations for Computing		
Course Objectives: Course intends to prepare the students <ol style="list-style-type: none"> 1. To understand Data Analytics Life cycle. 2. To learn different types of Data Models and visualization. 3. To study quantitative and non-quantitative data visualization. 4. To select the appropriate software and chart types to model and visualize data. 5. To prepare visual reports, interactive charts and dashboards. 		
Course Outcomes: At the end of the Course Students will be able to: <ol style="list-style-type: none"> 1. Summarize data using Preprocessing Techniques and visualization. 2. Evaluate different visualizations for numeric and non-numeric data. 3. Recommend a method for visualizing high dimensional Data. 4. Create a story using data, design principles and tools for communication. 		
Course Contents		
Module I	Introduction to Data Science, Big Data and Data Modeling	8 Hrs.
	Need and Applications of Data Science and Big Data, Data Analytics Life Cycle , Phase 1: Discovery, Phase 2: Data Preparation, Phase 3: Model Planning, Phase 4: Model Building, Phase 5: Communication results, Phase 6: Operationalize. Introduction to Data Modeling, Modeling, Data Hybrid ,Object-Oriented, Prototyping , and Agile Methodologies, Data and Process Modeling, Unified Modeling Language (UML).	
Module II	Visualization of Numeric and Non Numeric data.	8 Hrs.
	Data Visualization, Types of data visualization, Data Visualization Techniques, Data Transformations and Visualization, Basic graphs, charts, and plots, histogram, pie charts, bar plots, Box plots, Visualization of Non-Numeric Data : Networks, Hierarchies, Symbol And Shaded Maps, Tree Map. Case Study: Tools used in Visualization, Create visualizations using d3.js.	
Module III	High dimensional data Visualization	8 Hrs.
	Data Analysis, Mapping of high dimensional data into suitable visualization method, Dimensionality Reduction, Principal component analysis, multidimensional clustering, Mosaic Plots, Trellis Displays, Parallel coordinate plots	
Module IV	Big data Modeling and Visualization	8 Hrs.
	Big data modeling: Introduction to big data modeling, Graph data models, Knowledge graph, modeling of streaming data using real-world datasets.

MDS2-010 Generative and Responsible AI		
Teaching Scheme: L: 04 Hrs./Week	Credits: 04	Examination Scheme: ISE: 20 marks CIE: 30 marks ESE: 50 marks
Prerequisite: Data structures and Algorithms, Discrete Mathematics		
Course Objectives:		
Course intends to prepare the students		
<ol style="list-style-type: none"> To learn the concepts of artificial intelligence and methods. To understand the concepts of Generative AI and Responsible AI To build models for Generative AI To design and solve real world problems using AI approaches. 		
Course Outcomes:		
At the end of the course students will be able to		
<ol style="list-style-type: none"> Apply the concepts of intelligent agents for different AI techniques. Understand the concepts of Generative AI Illustrate generative AI models for different applications Identify Responsible AI Features for AI applications 		
Course Contents		
Module I	Problem solving using AI techniques.	8 Hrs.
	Introduction to AI and applications, The Structure of Agents, Informed (Heuristic) Search Strategies, Unification and First-Order Inference, Forward Chaining, Backward Chaining, Resolution, Algorithms for classical planning, Goal stack planning, Heuristics for planning. Case study of Route planning and navigation in GPS systems and mapping applications	
Module II	Introduction to Generative AI	8 Hrs.
	Generative AI: Introduction, Difference between Generative and discriminative models, History and evolution of Generative AI, Neural Networks for Generative AI, GenAI Project Life Cycle, ML Model Building Process, Data Collection and Preprocessing, Training and Evaluation Overview, Deep Learning Techniques	
Module III	Generative AI Models	8 Hrs.
	Language Models, Transfer Learning and Pre-trained Models, Autoencoders, Variational Autoencoders, Advanced Generative AI Models, GAN Training Techniques, GAN Evaluation Techniques, Flow based models, Introduction to Generative AI Creativity Tools and Examples.	
Module IV	Responsible AI	8 Hrs.
	Responsible AI: Introduction, Principles and pillars of Responsible AI, Bias & Fairness: Explainability & Interpretability, Safety, Security, and Privacy. Metrics and Tools for RAI, Adversarial Testing, Explanations for Lime, SHAP, GradCam, Problems with generative models – Ethical Alignment Hallucination, Factual Correctness, Prompt Injection, Data Leakage, Deep

MDS2-011 Program Electives II

MDS2-011A Edge Computing and IoT Applications		
Teaching Scheme: L: 03 Hrs./week	Credits: 03	Examination Scheme: ISE: 20 marks CIE: 30 marks ESE: 50 marks
Prerequisite: Computer Networks, Internet of Things (IoT)		
Course Objectives: Course intends to prepare the students <ol style="list-style-type: none"> To understand and compare working principles of cloud, edge and fog computing. To study edge computing architectures and enabling technologies. To study real-world use cases of edge computing in IoT including autonomous vehicles, industrial automation, and smart cities. 		
Course Outcomes: At the end of the course students will be able to <ol style="list-style-type: none"> Differentiate between edge, fog and cloud computing in the context of IoT applications. Design the architecture of edge-enabled systems for IoT applications. Design applications in cloud-edge-IoT environments. Illustrate different deployment models, such as fog computing, mobile edge computing. 		
Course Contents		
Module I	Fundamentals of Edge Computing	8 Hrs
	Overview of cloud, edge and fog computing, cloud computing architectures, SaaS, PaaS, EaaS, limitations of cloud supported IoT applications, advantages and applications of edge computing, edge computing architectures, challenges and limitations of edge computing, recent trends in edge computing, Cloud-Edge-Fog comparison.	
Module II	Edge and Fog Computing Architectures	8 Hrs
	Evolution of IoT edge computing capabilities, edge-IoT integration, mapping of Edge Computing Architectures(ECA) to IoT layer models, ECA and IoT limitations and challenges, introduction to edge devices, overview of fog computing, fog computing architectures, characteristics of fog computing, applications, limitations, and challenges of fog computing, fog computing platforms.	
Module III	Enabling Technologies for Edge Computing	8 Hrs
	Introduction to MQTT and Kafka for end-to-end edge pipeline, containerization at the edge, cloudlet, mobile edge computing, machine learning for edge: sensor data in predictive maintenance, image classifier and self-driving cars.	
Module IV	Advanced Topics in Edge Computing and IoT	8 Hrs
	Security concerns in edge computing, lightweight edge clouds, Cloud-Fog-Edge enabled analytics, edge and fog intelligence, cognitive IoT applications using edge and fog computing for vision, speech, and text.	
	Case Studies of industry relevance/recent trends	5 Hrs

MDS2-011B Information Retrieval and Web Mining		
Teaching Scheme: L: 03 Hrs./Week	Credits: 03	Examination Scheme: ISE: 20 marks CIE: 30 marks ESE: 50 marks
Prerequisite: Database Management System, Data Structures and Algorithms, Probability and Statistics		
Course Objectives: Course intends to prepare the students <ol style="list-style-type: none"> 1. To explore text documents representation and retrieval methods. 2. To understand query formulation, evaluation and feedback relevance. 3. To study Supervised and Unsupervised learning Method for text analysis and retrieval. 4. To understand behavioral patterns and profiles of web users. 		
Course Outcomes: At the end of the course students will be able to <ol style="list-style-type: none"> 1. Analyze text documents representation and retrieval methods. 2. Analyze query performance for information retrieval systems. 3. Evaluate the performance of classification and clustering methods on text documents. 4. Assess behavioral patterns and profiles of the web by studying web user transactions. 		
Course Contents		
Module I	Introduction	8 Hrs.
	Overview of text retrieval systems: Boolean retrieval, the term vocabulary and postings list, Dictionaries and tolerant retrieval, Index construction and compression, Retrieval models and implementation: Vector Space Models, Vector Space Model, TF-IDF Weight.	
Module II	Language Models, Query Expansion and feedback evaluation	8 Hrs.
	Probabilistic models: statistical language models, Okapi/BM25, Language models for information retrieval, KL-divergence, Smoothing, Query expansion and feedback: Relevance feedback, pseudo relevance feedback, Query Reformulation, Computing scores in a complete search system, Evaluation in information retrieval.	
Module III	Text classification and Text clustering	8 Hrs.
	Text classification & Text clustering: The text classification problem, Naive Bayes text classification, Vector-space clustering: Partition based clustering algorithm, K-means algorithm, Hierarchical clustering, EM algorithm, Performance analysis. Ethical Issues in IR: Privacy, Fairness, Fake news and disinformation, Filter bubble, Viewpoint diversity, fostering extremism, Internet addiction.	
Module IV	Social Network Analysis and Web usage Mining	8 Hrs.
	Social Network Analysis: Centrality, Prestige, Co-Citation and Bibliographic Coupling: Co-Citation, Bibliographic Coupling, Page Ranking: PageRank Algorithm, Strengths and Weaknesses of PageRank, Timed PageRank and Recency Search. Web Usage Mining: Key Elements of Web Usage Data Pre-Processing, Data Modeling for Web Usage Mining, Discovery and Analysis of Web Usage Patterns: Session and Visitor Analysis, Cluster Analysis and Visitor Segmentation, Association and Correlation

MDS2-011C Multimodal Computing		
Teaching Scheme: L: 03 Hrs./week	Credits: 03	Examination Scheme: ISE: 20 marks CIE: 30 marks ESE: 50 marks
Prerequisite:		
Course Objectives: Course intends to prepare the students <ol style="list-style-type: none"> 1. To introduce fundamentals of multimodal computing. 2. To elaborate different multimodal learning paradigms. 3. To learn and analyze different multimodal learning strategies. 		
Course Outcomes: At the end of the course students will be able to <ol style="list-style-type: none"> 1. Comprehend complex concepts better when exposed to multiple modalities. 2. Apply knowledge across contexts with deeper understanding. 3. Express themselves using various mediums, improving communication skills. 		
Course Contents		
	Introduction to Multimodal computing	
Module I	Multimodality introduction, Overview of human communication practices from a multimodal perspective, need of multimodal computing, Need of Multimodal Behaviors & signals, Modes of Multimodal Learning (speech, audio, written and print, illustrations), Multimodal Machine learning and Artificial Intelligence, Applications of MM, Limitations of MM.	8 Hrs
	Text Processing in Multimodal computing	
Module II	Overview of text processing techniques-tokenization, stemming, lemmatization, handle noisy and unstructured text.NLP fundamentals, large language models (BERT, GPT), Multimodal fusion methods, Visual text analysis, transfer learning across modalities, Applications.	8 Hrs
	Speech Processing in Multimodal computing	
Module III	Overview of speech processing, Digital Signal processing basics, STFT (Short time Fourier transform). Acoustic Phonetics and Articulatory Phonetics , Speech Prosody, Speech Prosody Modeling (Fujisaki Model) Automatic speech recognition- Hidden Markov models, Speech synthesis -text to speech and speech to text, applications.	8 Hrs
	Image and Video processing in Multimodal computing	
Module IV	Overview of multimodal learning and visual data, Image Representation ways-pixel values, histograms, deep features, Extraction of features from images using CNN activations, texture descriptors, applications, limitations. Overview of video processing in MM, Video compression, motion estimation, temporal modeling, video denoising, stabilization, summarization techniques, applications, case studies.	8 Hrs
	Case Studies of industry relevance/recent trends	5 Hrs

MDS2-011D Advanced Compilers		
Teaching Scheme: L: 03 Hrs./week	Credits: 03	Examination Scheme: ISE: 20 marks CIE: 30 marks ESE: 50 marks
Prerequisite: Knowledge of Automata Theory and Languages.		
Course Objectives: Course intends to prepare the students		
<ol style="list-style-type: none"> 1. To understand the structure of compilers. 2. To learn different ways of intermediate representation and Code generations. 3. To learn the optimization methods and LLVM framework. 		
Course Outcomes: At the end of the course students will be able to		
<ol style="list-style-type: none"> 1. Compare different parsing techniques 2. Apply optimization techniques to enhance the performance of generated code. 3. Evaluate the effectiveness of different compiler optimization strategies in terms of code size, speed, and memory usage. 4. Illustrate the basic workflows of LLVM framework 		
Course Contents		
Module I	Introduction	8 Hrs.
	Overview of compilation. Phases of Compiler, Lexical Analysis, Syntax analysis, Different types of Parsers. Predictive Parsing, LR parsing, Using Parser Generators, Parser error recovery. Semantic analysis: Type checking, Type checking Declaration and Expressions. Syntax-directed translation.	
Module II	Intermediate Representations and Code Generation	8 Hrs.
	Introduction, three address code generation, Control Flow Graphs, Intermediate representations trees, Translation into trees, declaration, Building a Simple Compiler Front end. Code generation: Introduction, Target Machine Description, instruction selection, pipelining and instruction scheduling. Peep-Hole Optimization.	
Module III	Code Optimization	8 Hrs.
	Intro to code optimization. DFA basics. Program representations for optimization. SSA form. SSA-enabled optimizations: conditional constant propagation, value numbering, partial redundancy elimination. SSA construction and destruction algorithms.	
Module IV	Types of Compilation and LLVM	8 Hrs.
	Just in-time Compilation, Garbage collection in Compiler, Parallelizing Compilers, Domain Specific Language Compilation. Intro to LLVM framework, Hands on Exercise with LLVM, Custom Compiler development using LLVM. Case study: Compiler design for high performance computing and message passing machines and scalable shared memory machines	
	Case Studies of industry relevance/recent trends	5 Hrs.

MDS2-011E Applied Security		
Teaching Scheme: L: 03 Hrs./week	Credits: 03	Examination Scheme: ISE: 20Marks CIE:30 Marks ESE:50 Marks
Prerequisite: Basics of computer Network Model, Information Security		
Course Objectives : Course intends to prepare the students <ol style="list-style-type: none"> 1. To State controls to protect against program flaws in execution– operating system support & administrative control 2. To learn about security threats posed by e–mails. 3. To learn Tools used in Computer Forensics and Cyber Applications. 		
Course Outcomes: At the end of the Course Students will be able to: <ol style="list-style-type: none"> 1. Summarize countermeasures to protect from the threats posed by e–mail systems & understand Internet Security 2. Write preventive measures by identifying different cyber attacks 3. Indicate usage of forensic linguistic in solving cases 		
Course Contents		
Securing Computer Network		
Module I	Taxonomies of vulnerabilities, attacks & mitigation for: Physical / DLL (Data Link Layer) /Network / Transport / Application layer: viz; Security at Network Layer (IPSec = IP Security), Security at Transport Layer (SSL = Secure Sockets Layer & TLS = Transport Layer Security), Security at Application Layer (PGP = Pretty Good Privacy, S/MIME = Secure/Multipurpose Internet Mail) Electronic Mail Security & e–mail (electronic mail) crime investigation RFC2822. IDS (Intrusion Detection System), IPS (Intrusion Prevention System). Router security: default setting Case studies: Fingerprints & Iris Scans. fail2ban, Snort / design honeypot.	9 Hrs
Security in Computing		
Module II	Program Security: Secure Programs– Secure coding ISO standard 5000, Non–malicious Program Errors, Targeted Malicious Code, Control against program threats. Trusted Operating System Design & Access Control in OS, Database Security: security requirements & sensitive data	8 Hrs
Administering Security		
Module III	Security Planning, Risk Analysis, Organizational Security Policies, Physical Security, Legal, Privacy & Ethical issues in computer security. Cost of Cybercrimes & IPR (Intellectual Property Rights) issues– Lessons for Organizations. Issues in Security Management. Computer Management in a practical way. Exemplar: Case studies of Ethics.	8 Hrs
Information Security in AI		
Module IV	Data Security in AI: Data Security: Protecting data used for AI training and operation from unauthorized access, tampering, and theft. - Encryption: Ensuring data is encrypted both in transit and at rest to prevent unauthorized access. - Access Control: Implementing strict access controls to limit who can view or	7 Hrs

MDS2-013 Laboratory Proficiency - II		
Teaching Scheme: P: 06 Hrs./Week	Credits: 03	Examination Scheme: CIE/TW: 25 Marks ESE(P/OR): 50 Marks
Prerequisite Courses: Knowledge of programming languages, Basics of Python/R/Java		
All assignments are compulsory. Each student should implement the assignments individually. Laboratory teachers should make sure that the dataset/code/write up is not the same.		
<p>Course Objectives: Course intends to prepare the students</p> <ol style="list-style-type: none"> 1. To learn different types of Data Models and visualization. 2. To think visually and prepare visual reports, interactive charts and dashboards. 3. To design and solve real world problems using AI approaches. 4. To explore cloud-edge-IoT environment and the architecture of edge-enabled systems for IoT applications. 5. To explore methods for representing and retrieving text documents. 6. To gain insight into the behavioral patterns and profiles of web users. 7. To design software architecture for a selected software system. 8. To learn different phases of compiler and LLVM framework. 9. To learn preventive measures by identifying different cyber-attacks. 10. To understand the need and feasibility of using blockchain technology in real-world applications. 		
<p>Course Outcomes: At the end of the course students will be able to</p> <ol style="list-style-type: none"> 1. Construct different visualizations for numeric and non-numeric data and data story. 2. Apply AI techniques to solve given problems. 3. Develop architectural designs for edge-enabled systems in IoT. 4. Evaluate methods for representing and retrieving text documents. 5. Implement loop restructuring and code optimisation techniques in the compiler. 6. Formulate preventive measures against various cyber-attacks through proactive identification. 7. Assess the necessity and viability of integrating blockchain technology into practical applications. 		
Data Modelling and Visualization		
<ol style="list-style-type: none"> 1. Application development using Plots/Graphs, Hierarchies, Symbol and Shaded Maps, Tree Map Python/PowerBI/Tableau. 2. Creating Data stories in Tableau for a Business Application 		
Generative and Responsible AI		

SCTR'S PUNE INSTITUTE OF COMPUTER TECHNOLOGY, PUNE-43

M. Tech. (Data Science) Curriculum Structure

With effect from the A.Y. 2024-25

1. Write a program to implement 8 puzzle problems /Blocks world problems using any informed search algorithm.
2. Implement generative models using TensorFlow or PyTorch.

Edge Computing & IoT Applications

1. a) Setup edge-cloud-IoT environment and develop a data analytics application in the above set-up using open IoT/IIoT datasets.
OR
b) Setup edge-cloud-IoT environment and develop an application using lightweight machine learning models for edge enabled IoT systems.
2. Develop an edge-enabled application for real-time monitoring, video analytics, or sensor data processing.

Information Retrieval & Web mining

1. Consider 10 documents. Construct a count of each document term and return the top 10 frequently occurring terms in the document collection using the TF-IDF score. Find similarity between documents using different similarity measures. Construct a graph for zips and heaps law. Evaluate the performance of similarity measures using precision, recall and F measure.
2. Develop a program to construct a social network graph and calculate the PageRank scores for each node in a given graph and display the score of each node for each iteration of the PageRank algorithm computation.

Multi Modal Computing

1. a) Develop a customer service chatbot using speech recognition and text analysis to provide a more natural and efficient user experience. OR
b) Develop a robust speech emotion recognition system using a short time Fourier transform to accurately classify emotions from spoken audio in a noisy environment.
2. Design and develop a system that can recognise traffic signs such as speed limit, signals and directional indicators using Convolutional Neural network.

Advanced Compilers

1. Write a program to demonstrate loop restructuring in C/C++.
2. Write a program to implement code optimization.

Applied Security

1. a) Develop data visualization of last few years breach record
Or
b) Write a program to analyze e-mail header
2. Develop a decentralized app for real-world application using blockchain

With effect from the A.Y. 2024-25

MDS2-014 Skill Enhancement Lab		
Teaching Scheme: P: 02 Hrs./week	Credits: 01	Examination Scheme: CIE/TW: 25 Marks
Prerequisite:		
Course Objectives: Course intends to prepare the students <ol style="list-style-type: none"> 1. To solve and devise solutions to a range of elementary real-world problems. 2. To explore and apply key concepts in logical thinking to business problems. 3. To enable students to critically analyze material (information) to evaluate evidence, construct reasoned arguments, and communicate inferences and conclusions. 		
Course Outcomes: At the end of the course students will be able to <ol style="list-style-type: none"> 1. Develop problem-solving skills and critical thinking abilities in the context of recruitment aptitude tests. 2. Illustrate self-efficacy through verbal and nonverbal communication behaviors. 		
Guidelines for conduction and evaluation of the laboratory sessions: Students will be encouraged to study and prepare for the contents relevant to the modules- Quantitative Aptitude, Logical Reasoning and Technical communication. Evaluation can be in terms of practice tests/ mock tests/ MCQ based tests, Group discussion, Mock interview, and presentation.		
Course Contents		
Module I	Quantitative Aptitude	6 Hrs.
	Percentage; Profit/ Loss; Simplification and Approximation: Decimal fractions, Square Roots & Cube Roots; Average; Ratio and Proportion: Partnerships; Age; Mixture and alligation; Number Series; Arithmetic: Time and work, Time, Distance and Speed, Boats and streams; Data Interpretation: Pie chart, Bar chart, Table chart.	
Module II	Logical Reasoning	6 Hrs.
	Distance and direction; Blood relation: Linear inequalities; Ranking arrangement; Coding decoding: Chinese/ Symbolic, Number, Symbolic, Miscellaneous, Letter; Syllogism; Seating arrangement; Puzzle; Input- Output; Alphabetic series; Statements and assumptions; Statements and conclusions.	
Module III	Technical Communication	6 Hrs.
	Vocabulary building; Oral Communication and Speaking Techniques; Group Discussions– dynamics of group discussion, Lateral thinking, Brainstorming and Negotiation skills; Meetings– making meeting effective, chairing a meeting, decision making, seeking opinions, interrupting, and handling interruptions, clarifications, closure Agenda, Minute writing; Presentation skills; Interview skills– formal & informal interviews, concept and process, pre-interview planning, opening strategies, answering strategies, interview through tele and video-conferencing.

MDS2-015 Seminar I		
Teaching Scheme: P: 04 Hrs./week	Credit: 02	Examination Scheme: CIE/TW: 50 Marks ESE(OR): 50 Marks
<p>Course Objectives: Course intends to prepare the students</p> <ol style="list-style-type: none"> 1. To deepen students' understanding of advanced topics, emerging trends, and recent developments in computer engineering. 2. To enhance students' research skills, including literature review, experimental design, data collection and analysis, and interpretation of results, in the context of computer engineering research. 3. To improve students' ability to communicate technical concepts effectively through written reports, oral presentations, and technical documentation, targeting both technical and non-technical audiences. 		
<p>Course Outcomes: At the end of the course students will be able to</p> <ol style="list-style-type: none"> 1. Conduct thorough literature surveys confined to the domain of choice. 2. Develop presentation skills to deliver the technical contents. 3. Prepare the report of the technical research domain. 		
<p>The student shall have to deliver the seminar I in semester II on a topic approved by guide and authorities. It is recommended to allot a guide to the student since the commencement of semester I. The guide allotment preferably needs to be carried out in synchronization with mutual domains of interest. It is recommended that seminar shall be on the topic relevant to latest trends in the field of concerned branch, preferably on the topic of specialization based on the electives selected or domain of interest.</p> <p>It is appreciated and strongly recommended that the student will select the domain of his/her dissertation and identify the literature confined to the domain. Thorough literature study based on the broad identified topic has to be carried out. This practice will eventually lead to convergence of the efforts for the dissertation.</p> <p>The relevant literature then be explored as state-of-the-art, exotic, recent technological advancement, future trend, application and research & innovation. Multidisciplinary topics are encouraged. The student shall submit the duly approved and certified seminar report in standard format, for satisfactory completion of the work by the concerned Guide and head of the department/institute. The student will be assessed based on his/her presentation and preparations by the panel of examiners out of them one has to be an external examiner.</p> <p>The students are expected to validate their study undertaken by publishing it at standard platforms.</p> <p>The student has to exhibit the continuous progress through regular reporting and presentations and proper documentation of the frequency of the activities in the sole discretion of the PG coordination.</p> <p>The continuous assessment of the progress needs to be documented unambiguously. For standardization and documentation, follow the guidelines circulated / as in the seminar logbook approved by the Board of Studies.</p>		

Semester III

M. Tech. (Data Science) Curriculum Structure
With effect from the A.Y. 2024-25

Semester – III

MDS3-018 Indian Knowledge System and Human Values		
Teaching Scheme: L: 01 Hrs./week P: 02 Hrs./week	Credits: 02	Examination Scheme: CIE: 30 marks CIE/TW: 20 marks
Prerequisite:		
<p>Course Objectives: Course intends to prepare the students Study/Explore/Understand the significance of IKS for a sustainable environment, love for nature, holistic ways of living, and health conscious that ultimately leads to quality life for everyone in the plane.</p> <ol style="list-style-type: none"> 1. To preserve and showcase the depth and breadth of Indian knowledge for a sustainable society and future generations. 2. To explore research in the area of Mindfulness for Sustainable Health. 3. To help the students to ensure sustained happiness and prosperity which are the core aspirations of all human beings. 4. To facilitate the development of a Holistic perspective among students towards life and profession as well as towards happiness and prosperity. 		
<p>Course Outcomes: At the end of the course students will be able to</p> <ol style="list-style-type: none"> 1. Differentiate between harmonious and disharmonious living 2. Contribute in developing solutions to social problems leading to peaceful life. 3. Demonstrate Holistic perspective towards life. 		
Course Contents		
Module I	Indian Knowledge System – An Introduction:	02 Hrs
	What is IKS? Why do we need IKS? Organization of IKS Historicity of IKS Some salient aspects of IKS.	.
Module II	A. Students can select any one from A/B/C	05 Hrs
	Introduction to Linguistics, Phonetics, Word generation, Computational aspects, Mnemonics Recursive operations, Rule-based operations, Sentence formation, Verbs and prefixes, Role of Sanskrit in natural language processing.	.
	B. Health Wellness and Psychology	

SCTR'S PUNE INSTITUTE OF COMPUTER TECHNOLOGY, PUNE-43

M. Tech. (Data Science) Curriculum Structure

With effect from the A.Y. 2024-25

	<p>Introduction to health, Āyurveda: approach to health, Sapta-dhātavaḥ : seven-tissues, Role of agni in health, Tri-doṣas , Āyurveda: definition of health, Psychological aspects of health ,Disease management elements , Dinacaryā: daily regimen for health & wellness, Importance of sleep, Food intake methods and drugs , Approach to lead a healthy life, Indian approach to psychology, The tri guṇa system & holistic picture of the individual, The Nature of Consciousness, Consciousness studies and issues</p>	
	<p>C. essentials for development</p>	
	<p>Indian scheme of knowledge, The knowledge triangle , Prameya – A vaiśeṣikan approach to physical reality , Dravyas – the constituents of the physical reality , Attributes – the properties of substances and Action – the driver of conjunction and disjunction , Sāmānya, viśēṣa, samavāya , Pramāṇa – the means of valid knowledge , Saṁśaya – ambiguities in existing knowledge, Framework for establishing valid knowledge , Deductive or inductive logic framework , Potential fallacies in the reasoning process , Siddhanta: established tenets in a field of study. Case Study : Societal Problem Solving : Smart City, Town Planning, Health Care Systems, etc.</p>	
Module III	<p>Value Education and Harmony in Human being</p>	06 Hrs
	<p>Understanding Value Education, Self-exploration as the Process for Value Education, Continuous Happiness and Prosperity – the Basic Human Aspirations, Right Understanding, Relationship and Physical Facility, Happiness and Prosperity – Current Scenario, Method to fulfill the Basic Human Aspirations Understanding Human being as the Co-existence of the Self and the Body, distinguishing between the Needs of the Self and the Body, The Body as an Instrument of the Self, Understanding Harmony in the Self, Harmony of the Self with the Body, Program to ensure self-regulation and Health.</p>	
Module IV	<p>Harmony in the Family, Society and Nature</p>	05 Hrs.
	<p>The Basic Unit of Human Interaction, Values in Human-to-Human Relationship, Nine universal values in relationships viz. Trust, Respect, Affection, Care, Guidance, Reverence, Glory, Gratitude, Love. Understanding Harmony in Society, Vision for the Universal Human Order, Human Order Five Dimension.. Understanding Harmony in Nature, self-regulation & mutual fulfillment among the Four orders of Nature, Realizing Existence as coexistence at all levels holistic perception of harmony in existence.</p>	
	<p>Case Studies of industry relevance/recent trends</p>	5 Hrs.

MDS3-021 Dissertation Stage -I		
Teaching Scheme: P: 08 Hrs./week	Credit: 04	Examination Scheme: CIE/TW: 50 Marks ESE(P/OR): 50 Marks
Course Objectives: Course intends to prepare the students <ol style="list-style-type: none"> 1. To identify the domain of research. 2. To formulate research problems with the help of the guide/mentor elaborating the research. 3. To acquire information and identify scope for the dissertation work. 		
Course Outcomes: At the end of the course students will be able to <ol style="list-style-type: none"> 1. Conduct thorough literature surveys confined to the domain of choice. 2. Identify scope of the dissertation work by analyzing the findings, work of various authors confined to the chosen domain. 3. Design the system and prepare the technical report of the dissertation work. 4. Develop presentation skills to deliver the technical contents. 		
Guidelines Dissertation Stage – I is an integral part of the Dissertation work. In this, the student shall complete the partial work of the Dissertation which will consist of problem statement, literature review, design, scheme of implementation (Mathematical Model/SRS/UML Diagrams /ERD/block diagram/ PERT chart) and Layout & Design of the Set-up. The student is expected to complete the dissertation at least up to the design phase. As a part of the progress report of Dissertation work Stage-I, the candidate shall deliver a presentation on the advancement in Technology pertaining to the selected dissertation topic. The student shall submit approved and certified Dissertation Stage-I report in standard format for satisfactory completion of the work duly signed by the concerned guide and head of the Department/Institute. The dissertation stage - I work will be assessed by a panel of examiners of which one is necessarily an external examiner. The assessment will be broadly based on literature study, work undergone, content delivery, presentation skills, documentation and report. The students are expected to validate their study undertaken by publishing it at standard platforms. The investigations and findings need to be validated appropriately at standard platforms – conference and/or peer reviewed journals. The student has to exhibit the continuous progress through regular reporting and presentations and proper documentation of the frequency of the activities in the sole discretion of the PG coordination. The continuous assessment of the progress needs to be documented unambiguously. For standardization and documentation, it is recommended to follow the formats and guidelines in the dissertation workbook approved by the department.
